

- RADIAFLEX® functions as a distributed antenna to provide communications in tunnels, mines and large building complexes and is the solution for any application in confined areas.
- Slots in the copper outer conductor allow a controlled portion of the internal RF energy to be radiated into the surrounding environment. Conversely, a signal transmitted near the cable will couple into the slots and be carried along the cable length.
- RADIAFLEX® is used for both one-way and two-way communication systems and because of its broadband capability, a single radiating cable can handle multiple communication systems simultaneously.
- This RADIAFLEX® radiating cable utilize a low-loss cellular polyethylene foam dielectric and a smooth copper outer conductor which offers a superior electrical performance together with good bending properties.

## FEATURES / BENEFITS

- Ultra-wideband from 30 MHz to 7200 MHz
- Support of 4G and 5G wireless bands and WLAN standards
- Suitable for a wide range of applications in tunnels and buildings
- Low coupling loss variations for balanced system design througout the overall supported spectrum

RLKAX12-50JFNA

acket		JFN		
acket Description		Halogen free, non corrosive, flame and fire retardant, low smoke, polyolefin		
Slot Design		Groups of vertical slots at short intervals		
Inner Conductor Material		Copper Clad Aluminum Wire		
Outer Conductor Material		Overlapping Copper Foil		
Diameter Inner Conductor	mm (in)	4.37 (0.17)		
Diameter Outer Conductor	mm (in)	11.4 (0.45)		
Diameter over Jacket Nominal	mm (in)	14.7 (0.58)		
Minimum Bending Radius, Single Bend	mm (in)	200 (7.9)		
Cable Weight	kg/m (lb/ft)	0.23 (0.16)		
Tensile Force	N (lb)	1300 (292)		
Indication of Slot Alignment		Bulge atop slots		
Recommended / Maximum Clamp Spacing	m (ft)	0.5 (1.6)		
Minimum Distance to Wall	mm (in)	80 (3.15)		

	Test methods for fire behaviour of cable :
	IEC 60754-1/-2 smoke emission: halogen free, non corrosive
	IEC 61034 low smoke
Jacket Testing Methods	IEC 60332-1 flame retardant
	IEC 60332-3-24 fire retardant
	UL1666, ASTM E 662, NES711 and NES713
	EN50575:2014 + A1:2016 (Hannover production) class Cca s1a d1 a1

## Notes

- RADIAFLEX® is used for both one-way and two-way communication systems and because of its broadband capability, a single radiating cable can handle multiple communication systems simultaneously.
- This RADIAFLEX® radiating cable utilize a low-loss cellular polyethylene foam dielectric and a smooth copper outer conductor which offers a superior electrical performance together with good bending properties
- Coupling loss values are measured with dipole (75 4200MHz) and biconical antenna (4400-7200MHz). Values are normalized to half-

wave dipole. The coupling loss values given in brackets are average values of all three spatial orientations (radial, parallel and orthogonal)

- Coupling loss values are given with tolerances of +5dB and longitudinal loss values with a tolerance of +5%
- Measured values below nominal are better. Note: measured values below nomila are better. They are not limited by any tolerance range
- Coupling as well as longitudinal loss of RFS RADIAFLEX® cables are measured by free-space method according to IEC 61196-4
- In case of a conflict of operational and stop band, please contact RFS for further assistance
- As with any radiating cable, the performance in building or tunnel environments may deviate from figures based on free-space method
